FACULTY OF ENGINEERING & TECHNOLOGY

Effective from Academic Batch: 2022-23

Programme: **Bachelor of Technology (Information Technology)**

Semester: **IV**

Course Code: **202040402**

Course Title: **Operating Systems**

Course Group: **Professional Core Course**

Course Objectives: The students will be able to understand the basic components of operating system, and the interactions among the various components. The students will learn policies for scheduling, deadlocks, memory management, synchronization, system calls, and file systems.

Teaching & Examination Scheme:

Contact hours per week			Course Credits	Examination Marks (Maximum / Passing)				
				Theory		J/V/P*		Total
Lecture	Tutorial	Practical		Internal	External	Internal	External	
3	0	2	4	50 / 18	50 / 17	25/9	25/9	150 / 53

* **J**: Jury; **V**: Viva; **P**: Practical

Detailed Syllabus:

Sr.	Contents	Hours
1	**Introduction:** Computer system overview, Architecture, Goals & Structures of O.S, Basic functions, Interaction of O.S. & hardware architecture, System calls, Batch, multiprogramming. Multitasking, time sharing, parallel, distributed & real-time O.S.	04
2	**Process and Thread Management:** Process Concept, Process states, Process control, Threads, Uni-processor Scheduling: Types of scheduling: Preemptive, Non preemptive, Scheduling algorithms: FCFS, SJF, RR, Priority, Thread Scheduling, Real Time Scheduling. System calls like ps, fork, join, exec family, wait.	07
3	**Inter Process Communication:** Race Conditions, Critical Section, Mutual Exclusion, Hardware Solution, Strict Alternation, Peterson's Solution, The Producer Consumer Problem, Semaphores, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dinning Philosopher Problem etc., Scheduling, Scheduling Algorithms. Principles of Concurrency, Mutual Exclusion: S/W approaches, H/W Support, Semaphores, Pipes, Message Passing, Signals, and Monitors **Deadlock:** Principles of Deadlock, Starvation, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, System calls.	12

4	**Memory Management:** Memory Management requirements, Memory partitioning: Fixed and Variable Partitioning, Memory Allocation: Allocation Strategies (First Fit, Best Fit, and Worst Fit), Swapping, Paging and Fragmentation. Demand Paging, Security Issues. Virtual memory concepts, VM management, Page Replacement Policies (FIFO, LRU, Optimal, Other Strategies), Thrashing.	06
5	**File Allocation Methods:** Continuous allocation, Linked list allocation, FAT allocation and indexed allocation methods. **I/O Management & Disk scheduling:** I/O Devices, Organization of I/O functions, Operating System Design issues, I/O Buffering, Disk Scheduling (FCFS, SCAN, C-SCAN, SSTF), RAID, Disk Cache.	09
5	Case Study: Window and Linux Operating Systems	02
	Total	40

List of Practicals / Tutorials:

1	Study of Basic commands of Linux/UNIX
2	Study of Advance commands and filters of Linux/UNIX.
3	Write a shell script to generate marksheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student
4	Write a shell script to display multiplication table of given number
5	Write a shell script to find factorial of given number n.
6	Write a menu driven shell script which will print the following menu and execute the given task. a. Display calendar of current month b. Display today's date and time c. Display usernames those are currently logged in the system d. Display your name at given x, y position e. Display your terminal number
7	Write a shell script to read n numbers as command arguments and sort them in descending order
8	Shell programming using filters (including grep, egrep, fgrep)
9	Write a shell script to read n numbers as command arguments and sort them in descending order.
10	Write a shell script to display all executable files, directories and zero sized files from current directory
11	Write a shell script to check entered string is palindrome or not.
12	Write a shell script to validate the entered date. (eg. Date format is : dd-mm-yyyy).
13	Write an awk program using function, which convert each word in a given text into capital.
14	Write a program which demonstrate the use of fork, join, and exec and wait system calls.
15	Write a C program to simulate FCFS CPU scheduling algorithm.

Reference Books:

1	Modern Operating Systems-By Andrew S. Tanenbaum (PHI)
2	Operating Systems: Internals & Design Principles, 8th Edition, William Stallings, Pearson Education India
3	Operating System Concepts, 9th edition Peter B. Galvin, Greg Gagne, Abraham Silberschatz, John Wiley & Sons, Inc.

Supplementary learning Material:

Pedagogy:
- Direct classroom teaching
- Audio Visual presentations/demonstrations
- Assignments/Quiz
- Continuous assessment
- Interactive methods
- Seminar/Poster Presentation
- Industrial/ Field visits
- Course Projects

Suggested Specification table with Marks (Theory) (Revised Bloom's Taxonomy):

Distribution of Theory Marks in %						R: Remembering; U: Understanding; A: Applying; N: Analyzing; E: Evaluating; C: Creating
R	U	A	N	E	C	
20%	30%	30%	20%	-	-	

Note: This specification table shall be treated as a general guideline for students and teachers. The actual distribution of marks in the question paper may vary slightly from above table.

Course Outcomes (CO):

Sr.	Course Outcome Statements	%weightage
CO-1	Understand the concepts, core structure of Operating Systems and basic architectural components involved in operating systems design.	20
CO-2	Understand the process management policies and scheduling of processes by CPU.	25
CO-3	Evaluate the requirement for process synchronization and coordination handled by operating system.	25
CO-4	Describe and analyze the memory management and its allocation policies.	20
CO-5	Analyze various device and resource management techniques for timesharing.	10
